

# PILOT Connect

## AOI , AXI and SPI networking

- networking all the inspection data from automatic optical, X-ray and solder paste inspections
- repair station with a clear representation of the AOI, AXI and SPI test data at a glance
- opportunities for process analysis and optimization by statistically linking the inspection data
- interfaces via ME and traceability systems
- integration with external systems possible
- integrated user management for all related systems and software modules
- convenient data maintenance tools

### Supporting operators

- use at verification and repair stations
- all data from the AOI, AXI and SPI test systems is visible at a glance
- it is possible to fully assess errors

### Targeted checking

- comprehensive, automatic system checking of ambiguous errors
- better assessment due to additional data capture

### Process analysis and optimization

- analysis, optimization and monitoring of the manufacturing process through statistical evaluation of the linked inspection data

### Flexible use of different database systems

- connection to different database systems such as MySQL, MSSQLServer and Oracle Database

### Integrated user management

- access to all computers and services that you are authorized for with a single log-on

### PILOT Connect

all data at a glance

### Common use of CAD data

- comprehensive system use of imported CAD data for creating the test programs
